DETAILED ACTION

1. The correspondence field on 11/20/2008 and 12/16/2008 have been entered and considered by Examiner.

Allowable Subject Matter

2. Claims 1, 3-20, and 22-40 are allowed.
3. The following is an Examiner's statement of reasons for allowance:

Regarding independent claims 1 and 20:

The closest prior art of record Kanazawa et al. discloses a PDP apparatus (in Fig. 7 and 8 discloses a general and conventional structure of a plasma display) comprising a panel unit (i.e. plasma display panel 10) and a driving unit (i.e. the units 14, 15 and 16 altogether considered as a driving unit) the panel unit (i.e. 10) including a first substrate (first substrate) on which a plurality of pairs of first and second electrodes (i.e. scan electrodes (i.e. 11, Fig. 7) and sustain electrodes (12, in Fig. 7) are formed (formed at first substrate) and a second substrate (second substrate) on which a plurality of third electrodes (i.e. data electrode, 13) are formed; the plurality of third electrodes (i.e. address (2) electrode, A1-A4) and in the sustain period, the driving unit controls the rise start timing but Kanazawa does not disclose the third electrodes are divided into a plurality of groups each of which includes two or more third electrodes and in the sustain period the driving unit controls the rise start timing in units of groups.

Nakamura (US Patent No: 5990630) discloses the third electrodes are divided into a plurality of groups (DA and Db) each of which includes two or more third electrodes (address electrodes) and in the sustain period the driving unit (i.e. the driving units for PDP) controls the rise start timing in units of groups (column 4, lines 58-67 , column 6, lines 12-22, and Fig. 7), but both Kanazawa and Nakamura do not teach or suggest that **in the sustain period the driving unit applies the voltage to the plurality of third electrodes in such that the waveforms of the voltage applied to the plurality of third electrodes differ among the plurality of group of third electrodes in terms of rising start timing which is set relative to a time at which the voltage applied to the plurality of pairs of first and second electrodes reaches a predetermined level.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
